U.S. Patent and Trademark Office PTOL-326 (Rev. 7-05) Application/Control Number: 10/815,533 Page 2

Art Unit: 1722

#### **DETAILED ACTION**

#### Election/Restrictions

1. The traversal is on the ground(s) that the Applicant believes that it would not be unduly burdensome for the Examiner to search the three embodiments. This is not found persuasive because of applicants' allegation that joiner of these distinct inventions would not present a serious burden to the U.S. Patent and Trademark Office. This allegation relied on the unsupported assumption that the search and examination of both inventions would be coextensive. However, the issues raised in the examination of apparatus claims are divergent from those raised in the examination of process claims. Further, while there may be some overlap in the searches of the two inventions, there is no reason to believe that the searches would be identical. Therefore, based on the additional work involved in searching and examining both distinct inventions together, restriction of the distinct inventions is clearly proper.

## Specification

2. The disclosure is objected to because of the following informalities: on page 1 of the specification, and in the declaration, the parent application should have been 10/411,551 instead of 10/411,511. Please make correction and update the status of this application in the declaration and the specification.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1722

4. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Gross (4,569,649).

Gross discloses a machine for making earth blocks, comprising a compression chamber (34a) for forming building blocks from earth (col. 1, lines 7-9), a slide member which is corresponding to a ram (80) connected to a ram head (70) for compacting the material in the compression chamber.

In regard to claim 2, the apparatus further comprises a second compression chamber (34b), which is compressed by a second ram head (col. 6, lines 28-31).

In regard to claims 3-5, the apparatus further comprises a filling chamber (18, 61) connected to the compression chamber (34a-b, col. 5, lines 16-25).

In regard to claims 7-9, Gross discloses a gate (73) capable of opening and closing the compression chamber (35-51) by an actuator (75).

In regard to claim11, the apparatus further comprises a hydraulic cylinder (94) for moving the slide member (80) which moves the ram heads (70).

In regard to claim 13, Gross further discloses a central processor (180), which is a programmable controller for controlling the apparatus throughout the blocks forming process (col. 9, lines 14-60).

5. Claims 1, 3-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Underwood (6,347,931).

Underwood teaches block ramming machine, comprising a compression chamber (28) containing compressible block (col. 1, lines 09-12), a ram (21) connected to a ramming plate (30)

for compress material into a cured block (180), wherein the ram capable of compressing the material into a desired shape conforming to the interior surfaces of the compression chamber (28), and a fill chamber (46) linearly connecting to the compression chamber (28).

In regard to claims 7-9, the apparatus further comprises a gate (70) blocking the compression chamber (28), wherein the gate (70) connected to an actuator (63) for opening and closing the compression chamber (28).

In regard to claims 10, the compression chamber (16, 28) comprises a ridge on the inner surface (17a-d) for shaping the surface of the forming blocks (col. 6, lines 55-61).

In regard to claims 11-12, the ramming device can either be hydraulic or pneumatic (col. 1, lines 4-7).

In regard to claim 13, the apparatus further comprises a controller (col. 9, line 53-54) for automatically control the operation of the ramming machine (col. 4, lines 56-67).

## Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gross (4,569,649) as applied to claims 1-9, 11 and 13 above and further in view of Crane (4,445,839).

Gross discloses a dual-press for forming earth blocks as described above, but fails to disclose that the ramming device is pneumatic.

Art Unit: 1722

Crane discloses a concrete mold press, comprising a mold (4) and a press head (12) movable by a fluid operatable cylinder (15), which could be pneumatic or hydraulic (col. 4, lines 7-10).

It would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to modify Gross by replacing the hydraulic cylinder by a pneumatic cylinder as taught by Crane because the pneumatic cylinder is usable in alternative to the hydraulic cylinder.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thu Khanh T. Nguyen whose telephone number is 571-272-1136. The examiner can normally be reached on Monday- Friday, 6:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on 571-272-1166. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
